

Privacy Policy

Effective Date

17 July 2020

Introduction

This Privacy Policy relates to the iOS app Ownself Check Ownself (CheckOwnself for short).

Who We Are

We are an independent app developer based in Singapore. We can be contacted at support@seesawapps.info

Information We Collect and Use

User's location data is gathered via the CoreLocation Framework within the iOS platform with user's permission. All data is for display in the app only and all data stays in the device as far as the app is concerned. The app does not send any data out to any server within our control or any third party servers for storage. There is only 1 occasion where CheckOwnself sends out data: when the user taps on the info button on a map location to reveal its street address. What happens here is a process called reverse geocoding where location coordinates are sent to Apple's server to retrieve the street address of the point.

Disclosure and Transfer of Information

As explained in the previous section, CheckOwnself does not disclose or transfer any information to anyone.

Enforcement

We regularly review our compliance with this Policy. Please feel free to direct any questions or concerns regarding this Policy to support@seesawapps.info

Privacy Policy Updates

We may update this Privacy Policy from time to time without prior notice. You can determine when this Policy was last revised by checking the Effective Date. We encourage you to periodically review this privacy policy to ensure you understand our privacy practices.
